Alpha Chi Honor Society, Dean's List with Honors, Kid's Club,
and Habitat for Humanity

FEATURED PROJECT

Ficus is a gamified stock-trading app that uses fictitious money to trade stocks. The purpose of the app is for users to buy and sell stocks in their account and compete against other members to see who comes out ahead on the leaderboard every week. Every member starts out with \$10,000 and they can use it to buy or sell stocks. The amount in equity will fluctuate with the current stock market. This project was created using React-Native, with the backend utilizing MongoDB, Express, Redis, and Loopback. Available for download in the Apple iTunes Store under Ficus Mini.

Please view my Github for more projects.
